Demo 04 — Advanced: Full model lifecycle

Description

Shows the complete create → update → analyze → recommend pipeline, mimicking a real conversation where a user iteratively builds up their business model and gets actionable insights.

1. Create a quarterly SaaS revenue model
2. Populate data quarter by quarter (as if actuals come in)
3. Update an assumption mid-cycle
4. Run a full summary analysis
5. Get strategic recommendations with a specific goal
6. Clean up

Demo

> *Create a SaaS revenue model called demo-saas-plan with Q1–Q4 2026, tracking Revenue, Costs, and Headcount, assuming 12% growth and 60% cost ratio, starting with Q1 revenue of $500K and 25 heads.*

Your SaaS revenue model "demo-saas-plan" has been created with the following details: Dimensions: Q1 2026, Q2 2026, Q3 2026, Q4 2026 Metrics: Revenue (USD), Costs (USD), Headcount (FTE) Assumptions:

- Revenue growth rate: 12% per quarter
- Cost ratio: 60% of revenue
- Starting Q1 revenue: $500,000
- Starting Q1 headcount: 25 Here is the initial model:

Metric	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Revenue (USD)	500,000	560,000	627,200	702,464
Costs (USD)	300,000	336,000	376,320	421,478
Headcount (FTE)	25	—	—	—
Would you like to fill in headcount for future quarters, update any numbers, or proceed with analysis or planning?				

> *Update demo-saas-plan with Q2 actuals: $580K revenue and 28 headcount.*

The demo-saas-plan model has been updated with Q2 2026 actuals:

- Revenue (Q2 2026): $580,000 (previously $560,000)
- Headcount (Q2 2026): 28 (was not set previously) Here is your current model:

Metric	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Revenue (USD)	500,000	580,000	627,200	702,464
Costs (USD)	300,000	336,000	376,320	421,478

Headcount (FTE)	25	28	—	—
Let me know if you'd like to update additional data, fill in projections, or run further scenarios on this plan!				

> *The cost ratio assumption in demo-saas-plan has been updated from 60% to 55% to reflect market changes. Current model (assumptions updated, but Costs values have not automatically been recalculated):*
>
> | *Metric* | *Q1 2026* | *Q2 2026* | *Q3 2026* | *Q4 2026* |
> |---|---|---|---|---|
> | *Revenue (USD)* | *500,000* | *580,000* | *627,200* | *702,464* |
> | *Costs (USD)* | *300,000* | *336,000* | *376,320* | *421,478* |
> | *Headcount (FTE)* | *25* | *28* | *—* | *—* |
> | *Assumptions:* | | | | |

- revenue_growth_rate: 0.12
- cost_ratio: 0.55 If you want to recalculate Costs using the new 55% ratio, let me know and I will update the numbers accordingly!

> *Show me the current state of demo-saas-plan.*

Here is the current state of your demo-saas-plan model:

Metric	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Revenue (USD)	500,000	580,000	627,200	702,464
Costs (USD)	300,000	336,000	376,320	421,478
Headcount (FTE)	25	28	—	—
Assumptions:				

- Revenue growth rate: 0.12 (12%)
- Cost ratio: 0.55 (recently updated from 0.60) Note: “Costs” values have not yet been recalculated based on the updated 55% cost ratio and are still showing the prior figures. Would you like me to recalculate the Cost values using the new ratio for all quarters?

> *Run a full summary analysis on demo-saas-plan.*

Here is a full summary analysis of your demo-saas-plan model:

Metrics Overview

Revenue (USD)

- Total: $2,409,664
- Mean: $602,416

- Min: $500,000 (Q1 2026)
- Max: $702,464 (Q4 2026)
- Trend: Up (largest swing: Q1 2026 → Q2 2026 at +16.0%) Costs (USD)
- Total: $1,433,798
- Mean: $358,450
- Min: $300,000 (Q1 2026)
- Max: $421,478 (Q4 2026)
- Trend: Up (largest swing: Q1 2026 → Q2 2026 at +12.0%) Headcount (FTE)
- Total: 53
- Mean: 27
- Min: 25 (Q1 2026)
- Max: 28 (Q2 2026)
- Trend: Stable (largest swing: Q1 2026 → Q2 2026 at +12.0%)

Anomalies (threshold: 50%)

None detected. Overall: No anomalies detected. Model data looks consistent. If you would like to see a specific trend, anomaly, or breakdown by quarter, let me know!

> *Give me recommendations for demo-saas-plan to reach $3M annual revenue while keeping headcount under 40.*

Here are strategic recommendations for demo-saas-plan to reach $3M annual revenue in 2026 while keeping headcount under 40: Model Overview

- Revenue (USD): total = $2,409,664 | mean = $602,416 | trend: +40.5% | Q1 = $500K, Q4 = $702K
- Costs (USD): total = $1,433,798 | mean = $358,450 | trend: +40.5%
- Headcount (FTE): total = 53 | mean = 27 | trend: +12% | Q1 = 25, Q2 = 28 Recommendations:

1. To achieve your goal ("reach $3M annual revenue for 2026 while keeping headcount under 40"), you should aim for annual Revenue of at least $2,891,597, which is about 20% higher than your current projection of $2,409,664 for 2026.
2. Options to achieve the revenue target without exceeding 40 FTEs:

- Increase your quarterly growth rate (currently 12%) either through higher sales, improved retention, or price increases.
- Accelerate acquisition or upsell initiatives, focusing on high-value customers for greater revenue without corresponding headcount growth.
- Leverage automation and operational efficiency to support growth with minimal hiring.
- Explore strategic partnerships or channel sales to expand distribution without additional headcount.

3. Closely monitor actuals each quarter and course-correct by reforecasting revenue and carefully managing hiring plans to maintain the headcount cap.
4. Review your cost structure: improved gross margins from the new (lower) cost ratio will support scalable growth as revenue increases. Would you like a milestone plan showing the exact quarterly targets needed to hit $3M by year-end under these constraints?

> *Delete the demo-saas-plan model.*

The demo-saas-plan model has been deleted. If you need to create a new model or work on a different one, just let me know!

> */quit*

Bye.
