# Demo 08 — Elaborate: Multi-Region Product Launch

## Description

Scenario: You're launching a new product ("Project Atlas") into three markets simultaneously. Each market has its own revenue trajectory, cost structure, and growth dynamics. The VP of Product wants to know:

- Which market is performing best?
- Are there anomalies to investigate?
- What pricing/growth adjustments maximize total revenue?
- What's the path to $500K combined monthly revenue?

Workflow:

- Phase 1 — Create 3 regional models (NA, EMEA, APAC) with launch data
- Phase 2 — Populate months 2–4 with real traction data (varied by region)
- Phase 3 — Analyze each region: trends, anomalies, summaries
- Phase 4 — Cross-region strategy: recommend per region
- Phase 5 — Run pricing experiments per region via scenario comparison
- Phase 6 — Build a milestone plan for the top-performing region
- Phase 7 — Simulate a coordinated growth push across all regions
- Cleanup

## Demo

> *Create a North America launch model called demo-atlas-na over 6 months, tracking Revenue and Costs in USD, with 20% growth, 50% cost ratio, and $120K Month 1 revenue.*

The North America launch model "demo-atlas-na" has been created for 6 months, tracking Revenue and Costs in USD, with the following key setup:

- Revenue growth rate: 20% per month
- Costs set at 50% of Revenue
- Month 1 Revenue set to $120,000 Would you like to view the full model or perform further actions (e.g., fill in forecasted months or run scenarios)?

> *Create an EMEA launch model called demo-atlas-emea over 6 months, with 12% growth, 65% cost ratio, and $45K Month 1 revenue.*

The EMEA launch model "demo-atlas-emea" has been created for 6 months with these parameters:

- Revenue grows at 12% per month
- Costs are 65% of Revenue
- Month 1 Revenue is set to $45,000 Would you like to view the full model details, auto-calculate future months, or perform another action?

> *Create an APAC launch model called demo-atlas-apac over 6 months, with 30% growth, 70% cost ratio, and $25K Month 1 revenue.*

The APAC launch model "demo-atlas-apac" has been created for 6 months with these parameters:

- Revenue growth: 30% per month
- Costs: 70% of Revenue
- Month 1 Revenue: $25,000 Would you like to view the model, forecast the upcoming months, or take another action?

> *Update demo-atlas-na with months 2–4 revenue: $148K, $135K, and $175K.*

The "demo-atlas-na" model has been updated:

- Revenue for Month 2: $148,000
- Revenue for Month 3: $135,000
- Revenue for Month 4: $175,000 Would you like to adjust the forecasts for other months, update costs, or view the updated model?

> *Update demo-atlas-emea with months 2–4 revenue: $42K, $68K, and $110K.*

The "demo-atlas-emea" model has been updated with the following revenue values:

- Month 2: $42,000
- Month 3: $68,000
- Month 4: $110,000 Would you like to update more data, adjust costs, or view the current model?

> *Update demo-atlas-apac with months 2–4 revenue: $58K, $35K, and $72K.*

The "demo-atlas-apac" model has been updated with these revenue values:

- Month 2: $58,000
- Month 3: $35,000
- Month 4: $72,000 Would you like to update or forecast further months, adjust costs, or view the latest model data?

> *Show me the current state of all three regional models.*

## Here are the current states for all three regional launch models:

---

## North America (demo-atlas-na) ``` | Month 1 | Month 2 | Month 3 | Month 4 | Month 5 | Month 6

## Revenue (USD) | 120,000 | 148,000 | 135,000 | 175,000 | 248,832 | 298,598 Costs (USD) | 60,000 | 72,000 | 86,400 | 103,680 | 124,416 | 149,299 Assumptions: revenue_growth_rate: 0.2 cost_ratio: 0.5 ———————————————————————— `EMEA (demo-atlas-emea)` | Month 1 | Month 2 | Month 3 | Month 4 | Month 5 | Month 6

## Revenue (USD) | 45,000 | 42,000 | 68,000 | 110,000 | 70,809 | 79,306 Costs (USD) | 29,250 | 32,760 | 36,691 | 41,094 | 46,026 | 51,549 Assumptions: revenue_growth_rate: 0.12 cost_ratio: 0.65 ———————————————————————— `APAC (demo-atlas-apac)` | Month 1 | Month 2 | Month 3 | Month 4 | Month 5 | Month 6

Revenue (USD) | 25,000 | 58,000 | 35,000 | 72,000 | 71,403 | 92,824 Costs (USD) | 17,500 | 22,750 | 29,575 | 38,448 | 49,982 | 64,977

Assumptions: revenue_growth_rate: 0.3 cost_ratio: 0.7

```
Let me know if you want to adjust further, view visual summaries, or analyze any of these models!

>> Analyze the revenue trend for demo-atlas-na — look for the Month 3 dip.

Revenue trend analysis for "demo-atlas-na":
- Month 1 → Month 2: +23.3% increase (120,000 → 148,000)
- Month 2 → Month 3: -8.8% decrease (148,000 → 135,000) ← Noticeable dip
- Month 3 → Month 4: +29.6% strong rebound (135,000 → 175,000)
- Months 4–6: Return to strong growth rates (+42.2%, +20.0%)
The revenue trend clearly shows a dip in Month 3, with revenue dropping by 8.8% from Month 2 before
rebounding by nearly 30% in Month 4. This deviation is notable compared to the overall upward
revenue trajectory.
Would you like additional insight or anomaly detection for this dip?

>> Analyze the revenue trend for demo-atlas-emea — check the regulatory delay then hockey stick
pattern.
```

```
Here is the revenue trend analysis for "demo-atlas-emea":
- Month 1 → Month 2: -6.7% decrease (45,000 → 42,000)
- This reflects a period of stagnation or decline, consistent with a regulatory delay at launch.
- Month 2 → Month 3: +61.9% strong increase (42,000 → 68,000)
- Month 3 → Month 4: +61.8% another surge (68,000 → 110,000)
- These two consecutive jumps form a "hockey stick" growth pattern commonly seen after overcoming
early hurdles.
- Month 4 → Month 5: -35.6% decrease (110,000 → 70,809)
- Sharp drop after the peak.
- Month 5 → Month 6: +12.0% modest recovery (70,809 → 79,306)
Summary:
The trend shows a clear regulatory delay in the initial months, with revenue even declining in Month
2. This is followed by a classic "hockey stick" pattern in Months 3 and 4, marked by sharp growth
once constraints lift. The post-peak period then shows a drop and modest stabilization.
Would you like insight on anomalies, or to see projections/scenario analyses?

>> Analyze the revenue trend for demo-atlas-apac — look for the churn spike.

Here is the revenue trend analysis for "demo-atlas-apac":
- Month 1 → Month 2: +132.0% surge (25,000 → 58,000)
- Month 2 → Month 3: -39.7% sharp decline (58,000 → 35,000) ← Churn spike detected: this is a
significant drop, likely due to customer loss or other adverse event.
- Month 3 → Month 4: +105.7% strong rebound (35,000 → 72,000)
- Month 4 → Month 5: -0.8% nearly flat (72,000 → 71,403)
- Month 5 → Month 6: +30.0% solid recovery (71,403 → 92,824)
Summary:
The model shows high volatility, especially a pronounced churn spike in Month 3 when revenue falls
nearly 40% after rapid initial growth. This is followed by a strong rebound in Month 4, then
stabilization and renewed growth.
Would you like anomaly detection details for this model, or scenario forecasts?

>> Run anomaly detection on all three regional models.

Here are the anomaly detection results for all three regional models:
────────────────────────────────────────
North America (demo-atlas-na):
- Revenue (mean = $187,572)

  - [ANOMALY] Month 6: $298,598 (+59.2% above mean)
- Costs (mean = $99,299)

  - [ANOMALY] Month 6: $149,299 (+50.4% above mean)
────────────────────────────────────────
EMEA (demo-atlas-emea):
- Revenue (mean = $69,186)

  - [ANOMALY] Month 4: $110,000 (+59.0% above mean)
────────────────────────────────────────
APAC (demo-atlas-apac):
- Revenue (mean = $59,038)

  - [ANOMALY] Month 1: $25,000 (-57.7% below mean)
  - [ANOMALY] Month 6: $92,824 (+57.2% above mean)
- Costs (mean = $37,205)

  - [ANOMALY] Month 1: $17,500 (-53.0% below mean)
  - [ANOMALY] Month 6: $64,977 (+74.6% above mean)
Would you like further insights, explanations for these anomalies, or recommendations for next
steps?
```

```
>> Run a full summary on demo-atlas-apac, the most volatile region.

Here is the full summary for the demo-atlas-apac model, which demonstrates pronounced volatility:
────────────────────────────────────────
Summary: demo-atlas-apac
Metrics Overview:
- Revenue (USD)

  - Total: $354,227
  - Mean: $59,038
  - Min: $25,000 (Month 1)
  - Max: $92,824 (Month 6)
  - Trend: Upward (largest swing Month 1 → Month 2: +132.0%)
- Costs (USD)

  - Total: $223,232
  - Mean: $37,205
  - Min: $17,500 (Month 1)
  - Max: $64,977 (Month 6)
  - Trend: Upward (largest swing Month 3 → Month 4: +30.0%)
Anomalies (threshold: 50%):
- Revenue:

  - Month 1: -57.7% below mean
  - Month 6: +57.2% above mean
- Costs:

  - Month 1: -53.0% below mean
  - Month 6: +74.6% above mean
Overall:
- 4 anomalies detected across 2 metrics
- Highly volatile, with significant revenue and cost spikes at both the beginning (low) and end
(high) of the period
- Suggests possible data entry issues, unusual market events, or intentional scenario testing
Let me know if you'd like focused recommendations, a visual plot, or further breakdown of this
region's financial scenario!

>> Recommend a strategy for demo-atlas-na to sustain 20% monthly growth while keeping the cost ratio
at 50%.

Strategic recommendations for demo-atlas-na to sustain 20% monthly revenue growth while keeping the
cost ratio at 50%:
- Aim to achieve total Revenue of at least $1,350,516 (which is 20% above the current total of
$1,125,430).
- Current trends show both Revenue and Costs have increased by +148.8% over the 6-month period, with
the cost ratio effectively tracking at 50%.
- Maintain the discipline of scaling Costs directly with Revenue — for each new dollar of revenue,
allocate 0.50 to costs.
- Closely monitor for any deviations from the 20% monthly growth rate (e.g., dips like in Month 3)
and correct underlying issues swiftly.
- Ensure that new growth initiatives (product launches, marketing, partnerships) have clear cost
controls attached to preserve the 50% cost ratio as growth accelerates.
Would you like an action plan or scenario modeling to visualize how to hit these targets?

>> Recommend a strategy for demo-atlas-emea to sustain the Month 4 acceleration and reduce the cost
ratio from 65% to 55%.

Strategic recommendations for demo-atlas-emea to sustain Month 4's revenue acceleration and reduce
the cost ratio from 65% to 55%:
```

- Set a target to grow total Revenue to at least $498,138 (20% above the current total of $415,115), thus maintaining the strong acceleration shown in Month 4.
- Begin immediate initiatives to lower the cost ratio from 65% to 55%. Areas to focus on:

  - Identify and phase out non-essential expenses or renegotiate major supplier/vendor contracts.
  - Invest in process automation and efficiency improvements to reduce labor or operational overhead.
  - Prioritize higher-margin products or segments in sales and marketing campaigns.
- Monitor the effects of cost-cutting to ensure they do not impair revenue momentum, particularly the post-acceleration trajectory.
- Track the cost ratio on a monthly basis to ensure progress towards the 55% target, adjusting plans rapidly if the ratio plateaus or increases.

Would you like an action plan, scenario forecast at 55% costs, or breakdown of where to find cost savings?

>> Recommend a strategy for demo-atlas-apac to stabilize after the Month 3 churn dip and reach $100K monthly revenue by Month 6.

Strategic recommendations for demo-atlas-apac to stabilize after the Month 3 churn dip and reach $100,000 monthly revenue by Month 6:
- Target total Revenue of at least $425,072 (which is 20% above the current total of $354,227), ensuring Month 6 specifically hits or exceeds the $100,000 mark.
- Immediately investigate and address the root causes of the Month 3 churn dip (customer loss, competitive actions, product/market fit issues, etc.) to prevent recurrence.
- Implement a customer retention and recovery plan (e.g., loyalty programs, win-back offers, enhanced support) targeting lapsed and at-risk clients.
- Increase acquisition efforts in high-growth segments to drive fresh revenue leading into Month 6.
- Closely monitor monthly retention and revenue, prioritizing quick response to early signs of churn.
- Tighten customer success and proactive engagement to lock in gains post-recovery.
- Stress-test the plan via scenario modeling for Month 5–6 to ensure that $100K is realistically attainable.

Would you like a milestone plan to show how to reach $100K in Month 6, or more tactical recommendations on recovery and stabilization?

>> Compare three pricing strategies for demo-atlas-emea: Current Pricing, Premium Tier at +20%, and Volume Play at -15%.

Here is a comparison of three pricing strategies for demo-atlas-emea over the six months:
———————————————————————————————————

Pricing Scenarios Compared
- Current Pricing (baseline)
- Premium Tier (+20% price adjustment)
- Volume Play (-15% price adjustment)

| | Current Pricing | Premium Tier (+20%) | Volume Play (-15%) |
|---|---|---|---|
| Revenue / Month 1 | 45,000 | 45,000 | 45,000 |
| Revenue / Month 2 | 42,000 | 50,400 | 50,400 |
| Revenue / Month 3 | 68,000 | 56,448 | 56,448 |
| Revenue / Month 4 | 110,000 | 63,222 | 63,222 |
| Revenue / Month 5 | 70,809 | 70,809 | 70,809 |
| Revenue / Month 6 | 79,306 | 79,306 | 79,306 |
| Costs (all months) | [same as above, all scenarios] | | |

Best performing scenario (by total):
- Revenue: Current Pricing ($415,115 total)
- Costs: Current Pricing ($237,370 total)

Insights:
- Current Pricing yields the highest total revenue and cost amounts in this model.
- The simulated price adjustments for Premium Tier and Volume Play did not outperform the baseline in this run. This may be due to the way assumptions or demand elasticities are currently set in the

```
model.
Would you like scenario refinements, profit/margin analysis, or further investigation into
elasticity or demand effects under different pricing schemes?

>> Compare three recovery scenarios for demo-atlas-apac: Status Quo, Anti-Churn Invest, and Lean +
Targeted.

Here is the comparison of three recovery scenarios for demo-atlas-apac:
────────────────────────────────────────
Scenarios:
- Status Quo (current assumptions)
- Anti-Churn Invest (extra 10% retention investment)
- Lean + Targeted (cost ratio cut to 60%, revenue growth increased to 35%)
|                       | Status Quo | Anti-Churn Invest | Lean + Targeted |
|-----------------------|------------|-------------------|-----------------|
| Revenue / Month 1     |   25,000   |      25,000       |    25,000       |
| Revenue / Month 2     |   58,000   |      32,500       |    33,750       |
| Revenue / Month 3     |   35,000   |      42,250       |    45,563       |
| Revenue / Month 4     |   72,000   |      54,925       |    61,510       |
| Revenue / Month 5     |   71,403   |      71,403       |    83,039       |
| Revenue / Month 6     |   92,824   |      92,824       |   112,103       |
| Costs / Month 1–6     | [lower in Lean + Targeted after cost ratio trim]      |
────────────────────────────────────────
Best performing scenario by total:
- Revenue: Lean + Targeted ($360,965 total, +1.9% vs Status Quo)
- Costs: Status Quo ($223,232 total, lowest absolute spend)
Insights:
- Lean + Targeted delivers the most revenue, especially by Month 6, by both reducing costs and
increasing focus on targeted growth.
- Anti-Churn Invest improves revenue retention after dips but underperforms Lean + Targeted for
total revenue.
- Status Quo has the lowest overall costs, but achieves less total revenue.
Would you like detailed profit comparison, key actions per scenario, or further what-if testing
(e.g., adjusting parameters for even stronger recovery)?

>> Build a milestone plan for demo-atlas-na to reach $300K revenue by Month 6.

Milestone plan for demo-atlas-na to reach $300,000 revenue by Month 6:
Current State:
- Latest Revenue (Month 6): $298,598
- Reference (Month 5): $248,832
- Growth needed: +$51,168 between Month 5 and Month 6 (+20.6%)
Milestone Plan:
| Month    | Revenue (USD) | Status      |
|----------|---------------|-------------|
| Month 1  |   120,000     | ✓ (actual)  |
| Month 2  |   148,000     | ✓ (actual)  |
| Month 3  |   135,000     | ✓ (actual)  |
| Month 4  |   175,000     | ✓ (actual)  |
| Month 5  |   248,832     | ✓ (actual)  |
| Month 6  |   298,598     | ← target    |
Actions:
- Update the revenue_growth_rate to reflect the required per-period growth (+20.6% from Month 5 to
6).
- Run a simulation (modeler-skill simulate) to verify milestone feasibility.
- If the plan is validated, commit to the target by updating the model.
You are already within 0.5% of your $300K target. Would you like specific tactical actions to drive
an extra ~$1,400 in Month 6 or review scenario tests to ensure stability above $300K?

>> Build a recovery milestone plan for demo-atlas-apac to reach $100K revenue by Month 6.
```

```
Recovery milestone plan for demo-atlas-apac to reach $100,000 revenue by Month 6:
Current State:
- Latest Revenue (Month 6): $92,824
Gap Analysis:
- Reference (Month 5): $71,403
- Target (Month 6): $100,000
- Gap: $28,597 (+40.1% increase needed from Month 5 to Month 6)
Milestone Plan:
| Month    | Revenue (USD) | Status      |
|----------|---------------|-------------|
| Month 1  |   25,000      | ✓ (actual)  |
| Month 2  |   58,000      | ✓ (actual)  |
| Month 3  |   35,000      | ✓ (actual)  |
| Month 4  |   72,000      | ✓ (actual)  |
| Month 5  |   71,403      | ✓ (actual)  |
| Month 6  |   92,824      | ← current   |
| Month 6  |  100,000      | ← target    |
Actions:
- Update your revenue_growth_rate to achieve a +40.1% increase from Month 5 to Month 6.
- Run a simulation to preview milestone feasibility with the new growth rate.
- Once confirmed, update the model to lock in your approved plan.
You're within $7,200 of your $100K target for Month 6—a 40.1% growth over Month 5 is needed. Would
you like tactical recommendations to close this gap, a scenario simulation, or actions for customer
churn reduction?

>> Simulate demo-atlas-na with boosted 25% growth and a 45% cost ratio. Save as demo-atlas-na-
boosted.

Simulation complete!
The "demo-atlas-na" model was simulated with boosted assumptions:
- Revenue growth rate: increased from 20% → 25% monthly
- Cost ratio: reduced from 50% → 45%
Saved as: demo-atlas-na-boosted
Key before/after highlights (Month 6):
- Revenue: $298,598 → $366,211 (+22.6%)
- Costs: $149,299 → $164,795 (+10.4% but now at a much more efficient 45% of Revenue)
Would you like to view, analyze, or plan based on this boosted model?

>> Simulate demo-atlas-emea with boosted 17% growth and a 60% cost ratio.

Simulation results for "demo-atlas-emea" with boosted 17% monthly revenue growth and a reduced 60%
cost ratio:
Key Month 6 changes:
- Revenue: $79,306 → $98,659 (+24.4%)
- Costs: $51,549 → $59,195 (+14.8%, held to 60% of revenue)
Other highlights:
- Some revenue drop in Months 3–4 due to previous actuals, but strong gains in final periods
- Cost structure more efficient due to the lower ratio
This is a simulation only (not saved as a new model). Would you like to save this scenario, do the
same for another region, or analyze further?

>> Simulate demo-atlas-apac with boosted 35% growth and a 65% cost ratio.

Simulation results for "demo-atlas-apac" with a boosted 35% monthly revenue growth and a 65% cost
ratio:
- Revenue (Month 6): $92,824 → $112,103 (+20.8%)
- Costs (Month 6): $64,977 → $72,867 (+12.1%)
Other notes:
- Stronger recovery and upward trajectory after Month 3
```

- Cost efficiency improved versus the previous 70% ratio

This scenario is for simulation only and not saved. Would you like to save this as a new model, compare regionally, or explore further optimizations?

>> Run a summary analysis on demo-atlas-na-boosted — our top region with the growth push.

Here is the summary analysis for "demo-atlas-na-boosted" — your top region with an accelerated growth push:

---

Summary: demo-atlas-na-boosted

Metrics Overview:

- Revenue (USD)
  - Total: $1,351,055
  - Mean: $225,176
  - Min: $120,000 (Month 1)
  - Max: $366,211 (Month 6)
  - Trend: Upward (largest swing: Month 4 → Month 5 at +25.0%)
- Costs (USD)
  - Total: $607,975
  - Mean: $101,329
  - Min: $54,000 (Month 1)
  - Max: $164,795 (Month 6)
  - Trend: Upward (largest swing: Month 3 → Month 4 at +25.0%)

Anomalies (threshold: 50%):

- Revenue: Month 6 is +62.6% above mean
- Costs: Month 6 is +62.6% above mean

Overall:

- 2 anomalies detected (both in Month 6, for Revenue and Costs due to the aggressive growth push).
- Trend is strongly upward, with the fastest gains and highest totals of all simulated models.

Let me know if you'd like a comparison with earlier scenarios, a breakdown by margin, or further recommendations for managing anomalies tied to this "boosted" growth!

>> Build a milestone plan for demo-atlas-na-boosted to reach $350K revenue by Month 6.

Milestone plan for demo-atlas-na-boosted to reach $350,000 revenue by Month 6:

Current State:

- Month 6 Revenue: $366,211 (already above the $350,000 target)
- Reference (Month 5): $292,969
- Additional growth achieved from Month 5 to 6: +$73,242 (+25%)

Gap Analysis for $350K Target:

- Needed Month 5 to Month 6 growth: +$57,031 (+19.5% from Month 5)
- Your current scenario already exceeds the $350K goal.

Milestone Plan:

| Month | Revenue (USD) | Status |
|---|---|---|
| Month 1 | 120,000 | ✓ (actual) |
| Month 2 | 150,000 | ✓ (actual) |
| Month 3 | 187,500 | ✓ (actual) |
| Month 4 | 234,375 | ✓ (actual) |
| Month 5 | 292,969 | ✓ (actual) |
| Month 6 | 366,211 | ← achieve |

Actions:

- No additional growth is needed for this target; you are already above $350,000 for Month 6 in this boosted scenario.
- To optimize, consider revisiting the risk/return of this aggressive growth or reallocate excess growth to profit or tolerance for volatility.

Would you like recommendations for best use of this "overage" or explore margin/profit implications?

```
>> /quit

Bye.
```
